

M+™ Probiotic Micro Flora Spray

Probiotic surface treatment for ongoing environmental hygiene

M+™ Probiotic Micro Flora Spray is a concentrated, pH-neutral probiotic solution designed to support ongoing environmental hygiene after routine cleaning. Applied as a fine mist, M+ deposits beneficial probiotics that establish and maintain a healthy microbial community on treated surfaces. Unlike traditional chemistries that stop working once dry, the probiotic technology remains on surfaces, helping reduce organic residues and supporting a cleaner environment between scheduled cleaning cycles. M+ is intended for use after cleaning with an appropriate surface cleaner and is suitable for moisture-tolerant surfaces in non-critical areas where long-lasting environmental maintenance is desired. Product claims are based on manufacturer literature and should be used in accordance with product labeling.

Applied as a fine mist after cleaning, M+ introduces beneficial probiotics that remain on treated surfaces, supporting a stable microbial environment and helping maintain surface cleanliness over time. Manufacturer claims should be used in accordance with product labeling.

Features	
Supports ongoing environmental hygiene	
pH-neutral, non-corrosive formulation	
Applied after routine cleaning	
Helps maintain beneficial surface microflora	
Low-odor, residue-free application	

Part No.	Description	Size	Packaging
